Open Access Publishing at University of Strasbourg: How does it work and what is new?

Open access (OA) is a set of principles and practices through which research outputs like journal articles are distributed online, free of cost or other access barriers. In many disciplines, open access publishing has become a widespread practice and researchers have now many options available to them; they can deposit their work in a repository, and they can select an open access journal. Navigating this ecosystem can be challenging. This presentation will provide researchers with insights on the options available at University of Strasbourg and will address the following questions: how to make your publications open access? how to deposit your work in the institutional repository HAL? What is a predatory publisher and how to avoid them? What are Article Processing charges? Which agreements are in place with publishers at University of Strasbourg?

Dr. Adeline Rege holds a PhD in Modern History from Sorbonne University and a Degree as a Scientific Librarian. She is Head of "Pôle Appui à la diffusion de la recherche" at University of Strasbourg Library Services (Service des Bibliothèques) and co-head of Negotiations department at the french consortium Couperin. Her expertise extends to the negotiation of open access agreements with publishers, supporting negotiators, and advocating for authors rights. Drawing on her national experience in France, she also brings an international perspective to open science, as a member of LERU's Info & Open Access Policy Group and contributing, as an external expert and reviewer, to Switzerland's Open Science Strategy.

Les personnes souhaitant rencontrer A. Rege sont priées de prendre contact avec H. Meyer.
